Marine pneumatic rubber fender is a very practical product, it has many excellent features. First of all, this product has high energy absorption, low reaction force and surface pressure. The performance to ship and dock by two times the number of collisions, reduce the damage to ship and dock. While reducing the impact, no decline in the rate of energy absorption under any types of loading at any, contact area.

Second, the [marine pneumatic rubber fender](#) can float on the water and float up and down depending on the water level. In the process of floating back and forth, our marine pneumatic fender can guarantee very good stability without large scale lateral jitter. Thanks to our optimization of the product design, in terms of internal details of the perfect.

At the same time, taking into account the use of such products in the region, we strengthen its cold resistance, to ensure that it in cold and cold environment can also be very good performance.
